Software engineering intern at Podyx and 4th-year Information Systems & Technologies student at FON, University of Belgrade. Since 2023 I have built websites and internal tools for local businesses. Since 2025 I have also built my own agent pipelines, data pipelines and monitoring, with guardrails, retries and decision logs so a failure can be traced.

Experience

Software Engineering Intern Podyx · Belgrade, hybrid/remote Jul 2026–now

- Podyx is an all-in-one platform for podcast and creative studios: bookings, payments, invoicing and client management, used by more than 200 studios worldwide.
- I ship features and fixes in its production codebase, working through tickets and code review in an established team.

Web & internal tools developer Freelance · Belgrade 2023–now

- Websites and internal tools for local businesses, from the first conversation with the owner to deployment and ongoing support.
- One of them is a Django and AI internal system for a butcher and grill business. On a schedule, it produces daily P&L reports and the PDF declarations Serbian regulations require.
- I also shipped the Pilatiq Reformeri catalog and several client websites, working directly with the owners on requirements and iterations.

Independent systems Personal projects · Remote 2025–now

- Agent pipelines, data pipelines and monitoring of my own, built with guardrails and logs so a failure can be traced.
- tradingAgent runs a daily AI trading pipeline with FastAPI dashboards, circuit breakers and my approval on Telegram before anything executes.
- dev-dashboard monitors dozens of my repositories and syncs them into my Obsidian vault, with no third-party runtime dependencies.

Selected projects

Mesara Šisko · QR menu and ordering app, plus an internal operations system
Production software for a Serbian butcher and grill business: a Next.js QR menu and ordering app, and a Django and AI system for internal operations.
Next.js 16, Supabase, Django, Claude agents, React 19, APScheduler, SQLite, Docker — rostiljsisko.rs

tradingAgent · AI-driven daily trading pipeline
A Python and Claude agent that runs a daily S&P 500 rotation from start to finish: data, scoring, risk, execution. A FastAPI dashboard shows the portfolio, P&L and the reason behind every decision.
Python, Claude tool use, FastAPI, Interactive Brokers / Alpaca, Telegram, yfinance

dev-dashboard + Brain · Developer observability and knowledge tooling, built for myself
Scans every git repository on my machine plus my GitHub account, marks each project active, paused or abandoned, and writes a note for every active one into my Obsidian vault without overwriting what I wrote by hand. It has no third-party runtime dependencies: the git, GitHub and Obsidian integrations are my own.
Next.js 16, TypeScript, Node, Tailwind 4, Git, GitHub API, Obsidian, PowerShell

BelgradeBuddy AI · AI companion app for international visitors
A React Native and Supabase app for international visitors to Belgrade. The AI chat routes each question to a model that balances quality, latency and cost, and an arrival wizard covers the first hour after arriving. The interface is in English, Serbian and more.
React Native (Expo), NativeWind, Supabase, Edge Functions, OpenRouter / Claude, i18n

Pilatiq Reformeri · Product catalog for a Pilates reformer brand
A production catalog site for Pilatiq Pilates reformers: products with variants and strong visuals, built for search visibility and a smooth handoff to the client.
React, Vite — pilatiq.rs

Education

B.Sc. Information Systems & Technologies (TEP module)
Faculty of Organizational Sciences (FON), University of Belgrade
2023–2027, 4th year

Coursework
Computer networks and internet technologies, Software design, Information systems design, Operations research 1 and 2, Databases, Data structures and algorithms

Skills

Languages
Python, TypeScript, JavaScript, HTML and CSS, Java, SQL

Frameworks
Next.js, React, React Native (Expo), Django, FastAPI, Node.js, Vite

Databases
PostgreSQL / Supabase, SQLite, MySQL, Oracle

AI and automation
Claude and OpenRouter tool use, Agent pipelines, APScheduler, Data pipelines

Tools and workflow
Git and GitHub, The terminal (PowerShell, bash), Docker, Obsidian

Networking and CS
TCP/IP, HTTP, Wireshark, sockets, GNS3, Cisco Packet Tracer, Optimization and operations research

Practice
REST APIs, Internationalization, Testing with Vitest, Observability and logging

Languages

Serbian, native
English, professional working proficiency

Also

Figma, Grok, Agile and technical writing
