Since 2023 I have built websites and internal tools for local businesses, and since 2025 automation systems of my own in Python and TypeScript.

## Experience

**Software Engineering Intern** Podyx · Belgrade, hybrid/remote Jul 2026–now

- Podyx is an all-in-one platform for podcast and creative studios: bookings, payments, invoicing and client management, used by more than 200 studios worldwide.
- I ship features and fixes in its production codebase, working through tickets and code review in an established team.

**Web and Internal Tools Developer** Freelance · Belgrade 2023–now

- Websites and internal tools for local businesses, from the first conversation with the owner to deployment and ongoing support.
- For Mesara Šisko I built the internal system that produces daily P&L reports and the PDF declarations Serbian regulations require, on a schedule.

**Independent developer** Personal projects 2025–now

- Agent pipelines, data pipelines and monitoring of my own, built with guardrails and logs so a failure can be traced.

## Selected projects

**Mesara Šisko**
Production software for a Serbian butcher and grill business: a Next.js QR menu and ordering app, and a Django and AI system for internal operations.
Next.js 16, Supabase, Django, Claude agents, React 19, APScheduler, SQLite, Docker — rostiljsisko.rs

**tradingAgent**
A Python and Claude agent that runs a daily S&P 500 rotation from start to finish: data, scoring, risk, execution. A FastAPI dashboard shows the portfolio, P&L and the reason behind every decision.
Python, Claude tool use, FastAPI, Interactive Brokers / Alpaca, Telegram, yfinance

**dev-dashboard + Brain**
Scans the git repositories on my machine plus my GitHub account, marks each project active, paused or abandoned, and writes a note for every active one into my Obsidian vault without overwriting what I wrote by hand. It uses no third-party libraries for the git, GitHub and Obsidian integrations; I wrote them myself.
Next.js 16, TypeScript, Node, Tailwind 4, Git, GitHub API, Obsidian, PowerShell

**BelgradeBuddy AI**
A React Native and Supabase app for international visitors to Belgrade. The AI chat routes each question to a model that balances quality, latency and cost, and an arrival wizard covers a visitor's first hour in the city.
React Native (Expo), NativeWind, Supabase, Edge Functions, OpenRouter / Claude, i18n

**Pilatiq Reformeri**
A production catalog site for Pilatiq Pilates reformers, with product variants, built for search visibility.
React, Vite — pilatiq.rs

## Education

**B.Sc. Information Systems & Technologies**
Faculty of Organizational Sciences (FON), University of Belgrade
2023–2027, 4th year

**Coursework**
Computer networks and internet technologies, Software design, Information systems design, Operations research 1 and 2, Databases, Data structures and algorithms

## Skills

**Programming languages**
Python, TypeScript, JavaScript, HTML and CSS, Java, SQL

**Frameworks**
Next.js, React, React Native (Expo), Django, FastAPI, Node.js, Vite

**Databases**
PostgreSQL / Supabase, SQLite, MySQL, Oracle

**AI and automation**
Claude and OpenRouter tool use, agent pipelines, APScheduler, data pipelines

**Tools and workflow**
Git and GitHub, PowerShell and bash, Docker, Obsidian

**Networking and CS**
TCP/IP, HTTP, Wireshark, sockets, GNS3, Cisco Packet Tracer, optimization and operations research

**Practice**
REST APIs, internationalization, testing with Vitest, observability and logging

## Languages

Serbian, native
English, professional working proficiency

## Also

Figma, Agile and technical writing
